Math and literacy software for schools

Grafari and Calcularis

The AI-based learning software for training students aged 6 and older in overcoming learning difficulties, such as dyslexia and dyscalculia, to master fundamental skills in math, writing, and spelling.

grafari
by Constructor

Grafari helps students overcome challenges in reading, spelling, and writing with engaging exercises and evidence-based techniques. It activates different brain regions to train and automate writing skills. The app uses auditory and visual sensory channels, building strong connections between spoken and written language.

calcularis
by Constructor

Calcularis, the scientifically proven software, offers personalized exercises and interactive activities that make learning math enjoyable and effective. It helps practice mathematical operations. Numbers are displayed as digits, blocks, and colors – thus multisensory training involves different regions of the brain in learning math.

Scientifically proven

Apps are built on evidence-based research, ensuring academic success through the most effective learning methods for dyslexic and dyscalculia children.

Personalized learning

Each student receives a customised learning journey, addressing their specific needs and learning pace.
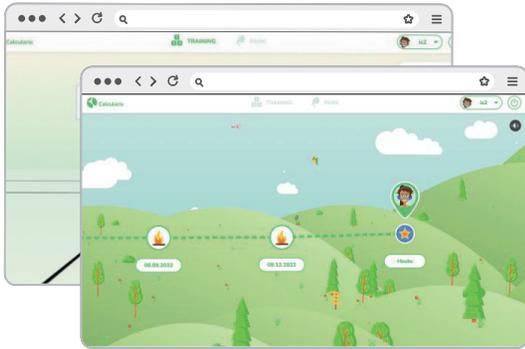

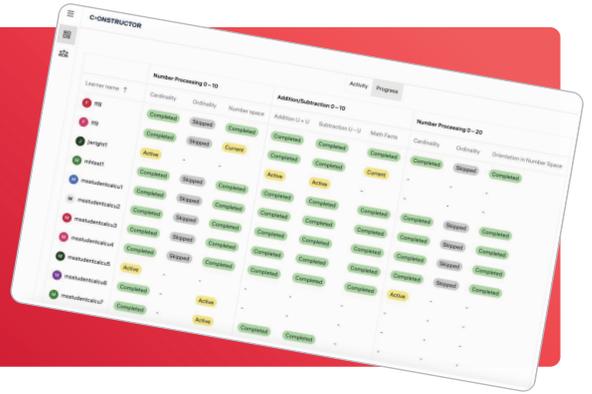

Teacher support

We provide resources and insights to assist teachers in maximising the apps' benefits in the classroom.

Engaging content

Our interactive exercises and games make learning fun and motivate students to stay engaged.

Coach

Comprehensive tool for teachers to view student progress, manage groups, and customize learning settings. It ensures personalized support and effective feedback.

Technical integration

Get started right away!
No IT resources or integrations required.
The software is accessible through web browsers.

Set up time – up to 1 hour!

Join 100,000+ children who have benefited from evidence-based programs to boost math and writing skills

15 years	45% more	32%	> 2000 schools	10+ papers peer reviewed
research in AI	correctly solved arithmetic problems	fewer spelling errors	have used these programs	confirming effectiveness
